WWW.AIRDEFENSE.NET

AirDefense™ is the innovator and leader in anywhere, anytime wireless security, which provides a complete suite of wireless security and operational support solutions that **secure** wireless networks and **protect** the extended mobile enterprise.

**AirDefense Enterprise 6.0**, the flagship product, is a wireless intrusion prevention system that monitors the airwaves 24x7 and automatically detects & responds to wireless threats and unauthorized devices on the wireless network.

**AirDefense Mobile**, complementary to AirDefense Enterprise allows administrators to perform wireless assessments, security audits, and locate and manage rogues.

**AirDefense Personal** is a client-side agent that protects the mobile user traveling beyond the protected enterprise perimeter.

**AirDefense BlueWatch** monitors and secures Bluetooth networks for corporations and detects insecure Bluetooth devices & connections.

Trusted by Fortune 500 corporations, government agencies, and healthcare organizations, AirDefense is relied upon to monitor **over 1,000,000 wireless devices** and provide secure, risk-free wireless networks around the world.

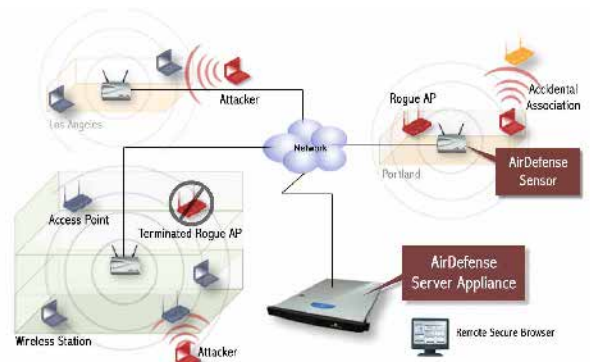

## Automated Wireless Intrusion Prevention

**AirDefense Enterprise 6.0** is the industry's first Self-Managing™ wireless intrusion prevention system (IPS) providing automated protection against wireless threats and attacks. As a key layer of security, AirDefense Enterprise complements wireless VPNs, encryption & authentication.

The Self-Managing capabilities of AirDefense Enterprise 6.0 allow enterprises to configure the system to manage itself, including identifying security risks, policy violations, threat levels, and automated threat mitigation. Requiring minimal administrative intervention, Enterprise 6.0 enables management by exception and produces improved protection and efficiency for the IT department.

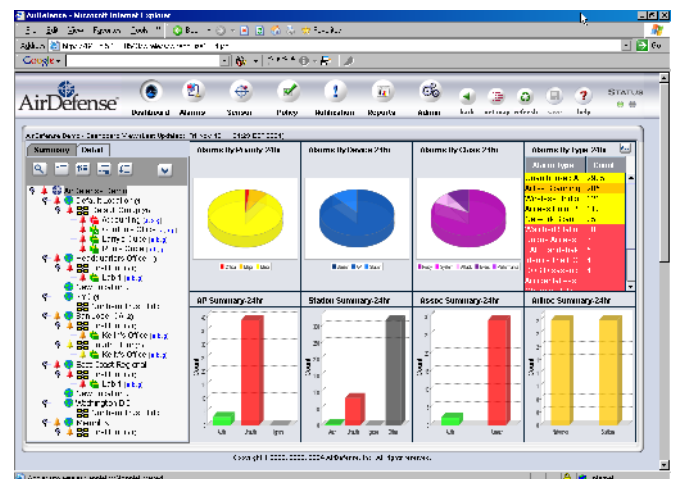

AirDefense Enterprise 6.0 detects & responds to wireless threats and unauthorized devices on the wireless network using an monitoring architecture of distributed smart sensors (monitoring 802.11 a/b/g) and a secure server appliance. Using patent-pending technology to correlate and analyze the monitored data, Enterprise 6.0 provides the industry's most accurate intrusion prevention for wireless networks. Scalable, centrally manageable and enterprise ready, it can support single offices, corporate campuses or hundreds of locations around the world.

AirDefense Enterprise 6.0 detects & responds to wireless threats and unauthorized devices on the wireless network using an monitoring architecture of distributed smart sensors (monitoring 802.11 a/b/g) and a secure server appliance. Using patent-pending technology to correlate and analyze the monitored data, Enterprise 6.0 provides the industry's most accurate intrusion prevention for wireless networks. Scalable, centrally manageable and enterprise ready, it can support single offices, corporate campuses or hundreds of locations around the world.

### AirDefense Enterprise 6.0 Functionality:

- Advanced Rogue Management
  - Detect, analyze, locate, prioritize and mitigate
- Accurate Wireless Intrusion Detection
  - Multiple engines for detection & correlation
  - Protects against documented attacks/day-zero attacks
- Automated Protection - Active Defenses
  - Manual & Policy-based Termination
  - Full Protection - wired, wireless termination
- Policy Enforcement
- Self-Managing System
  - One-Click Analysis
  - Plug & play configuration
- Remote Troubleshooting
- Forensics & Incident Analysis
- Anywhere, Anytime Protection

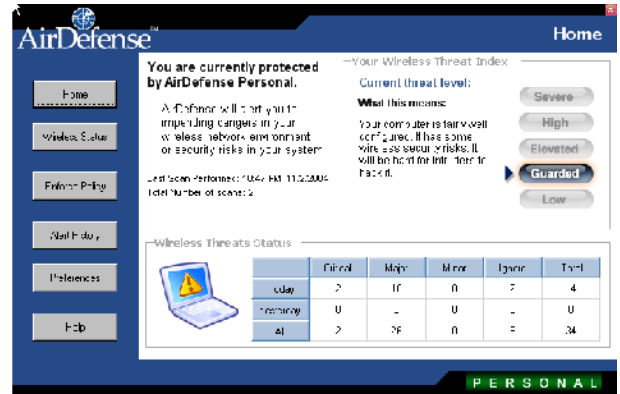

## Wireless Protection Anywhere

**AirDefense Personal™** : Because today's networks are virtual, with mobile employees extending the edge of corporate networks to hotspots and airports, AirDefense has expanded its anytime monitoring solutions to include AirDefense Personal. Residing on mobile users' computers, AirDefense Personal quietly monitors for malicious or accidental wireless activities and wireless misconfigurations that may cause security exposures or policy violations.

AirDefense Personal also has an automated integration with AirDefense Enterprise. Policy profiles that are centrally defined on AirDefense Enterprise are automatically transmitted to each mobile user. If threats are discovered, AirDefense Personal notifies the user and sends the logs to AirDefense Enterprise for central reporting & notification, enforcing cooperate policies and providing complete protection for the mobile worker, regardless of location.

## Mobile Scanning & Security

**AirDefense Mobile™** is a complementary solution to the AirDefense Enterprise monitoring platform. Running on a windows XP platform, AirDefense Mobile provides a real-time snapshot of all 802.11 a/b/g wireless infrastructure including:

- Real Time Device Discovery and Connection Analysis
- **Advanced Rogue Management**
- **Location Tracking**
- Live View for Traffic Analysis
- Wireless Network Usage and Health
- Real-time Reporting

## Bluetooth Security

**AirDefense BlueWatch™** is the industry's first commercial grade solution that enables companies to take proactive steps to close any security holes or backdoors by identifying all Bluetooth-enabled devices and their communications within given air space.

AirDefense **BlueWatch** can:

1. Identify different types of **Bluetooth devices**, including laptops, PDAs, keyboards and cell phones
2. Provide **key attributes**, including device class, manufacturer and signal strength
3. Illustrate **communication or connectivity**
4. Identify **services available** on each device, including network access, and fax
